

PMI **FLOW**REGULATOR

Single Use | IV Administration Set with Flow Regulator

Ideal for Non-Acute and Home Infusion Therapies

Designed to improve the accuracy of gravity infusion, the **PMI FLOW**REGULATOR offers consistency and reliability during gravity-fed delivery of medications. The intuitive, easily adjustable dial allows the clinician or caregiver to dial flows in the range of 5-300 ml/hr.

Product Features:

- 20 drops/ml drip chamber containing a 15 micron particulate filter
- Universal vented spike
- Adjusting dial to deliver 5-300 ml/hr flow rates
- Non-DEHP and not manufactured with natural rubber latex
- Priming volume: ~28.2ml
- Packaged sterile 50/box

Product Benefits:

- Cost effective alternative to expensive IV pump infusions
- Helps to reduce the risk of free flow and air bolus
- Easy to read and smooth adjusting rate flow dial
- Flow dial reduces opportunity for kinking vs. common roller-clamps
- Available in needle-free Y-site configuration for secondary infusion needs
- Available with 0.2 micron low-protein binding in-line filter when recommended

Ordering Information:

Item Number	Description	Qty.
PMIFR100	PMI IV admin set with flow regulator, 100" length, 20 drop, 15 micron filter in drip chamber, rotating male luer lock, vented cap, pinch clamp	50/box
PMIFR200	PMI IV admin set with flow regulator and needle-free y-site approx. 11" from distal end, 100" length, 20 drop, 15 micron filter in drip chamber, rotating male luer lock, vented cap, pinch clamp	50/box
PMIFR300	PMI IV admin set with flow regulator, 100" length, 20 drop, 15 micron filter in drip chamber, rotating male luer lock, vented cap with 0.2 micron in-line filter	50/box
