

Extractor-EZ[®]

The Extractor-EZ[®] is a disposable instrument designed to enlarge the fascial opening without necessarily enlarging the skin incision to facilitate the removal of specimens in any minimally invasive platform.

Product Features

- ◆ Designed to facilitate the extraction of any solid organ through a 10mm+ trocar
- ◆ Developed to achieve better approximation of fascial defect closure reducing the risk of hernia
- ◆ May reduce time removing specimens
- ◆ Blunt tip shaft with retractable stainless steel blade
- ◆ Easy to use blade button locks in place when blade is deployed
- ◆ Sterile disposable product for single patient use
- ◆ Not manufactured with natural rubber latex
- ◆ DEHP free

Reduce the Risk of Scalpel Injury

- ◆ Extractor-EZ[®] reduces blade exposure.
- ◆ The retractable blade is safe when passing the device during and after use.
- ◆ The 12.5" shaft is designed to introduce the blade into the abdominal cavity without the use of a surgeon's finger as guidance.
- ◆ With the blade retracted, the surgeon is able to maintain pneumoperitoneum while guiding the blunt shaft into position under direct vision of the camera.
- ◆ Designed with discernible arrow to identify scalpel orientation when inserted in trocar site.
